

## **Information Security Consultant, Researcher and Inventor Expands Business Services To Include Global Patent Research**

*Andrew M. Colarik, PhD, an information security consultant, researcher and inventor today announced a new service that will assist organizations in conducting global investigations of product technologies through patent and patent application literature reviews. This new service will be an expansion of the research capabilities previously offered by AndrewColarik.com, and is designed to provide preliminary and detailed literature reviews for those organizations seeking to submit patent applications, introduce new products or processes or need access to the latest product developments.*

Cleveland, OH (PRWEB) June 1, 2005 - Andrew M. Colarik, PhD, an information security consultant, researcher and inventor today announced a new service that will assist organizations in conducting global investigations of product technologies through patent and patent application literature reviews. This new service will be an expansion of the research capabilities previously offered by AndrewColarik.com, and is designed to provide preliminary and detailed literature reviews for those organizations seeking to submit patent applications, introduce new products or processes or need access to the latest product developments.

"Product life cycles are getting shorter as a result of increasing demand for new product innovations and features" said Dr. Colarik. "In today's environment, organizations need access to good, reliable international product information. By conducting thorough reviews of patent literature, businesses can better position themselves for product placement, features, and differentiation."

The new service offered by AndrewColarik.com will be fee-based and will range from global patent and patent application reviews, supporting preliminary and detailed literature reviews, and the assembly of comparative product analysis. "Patents contain a wealth of information" added Dr. Colarik. "For those willing to systematically review patent literature, an in-depth examination of their claims, processes, and relative relationships with competing products and technologies can be developed."
